Details

A Linux server configured as an SSL LAMP with FTP and Webmin installed.

phpMyAdmin and other web-based systems (incl Webmin) are pre-installed to provide you with full system and server remote access, should the Admin functions inside your website or CMS not be sufficient for site operations.

This is a "managed" VPS product, so updates to software packages are installed by Network Presence SysAdmins in cooperation with the customer.

Some standard Linux/Apache/PHP "Hardening" and Performance configuration settings are applied and we work with the customer re: other software and items they may require.

Multiple web sites can also be installed to this VPS and included in the base price.

You have 24x7 Ticketed and 8am to 8pm Live SysAdmin Support included.

Features
